REVIEWS

The book "Exam Preparatory Manual" by Archith Bloor is very good. The topics are presented concisely, and images are included to enhance understanding. The language is very easy to follow, making this book ideal for exam preparation. It also covers small subjects thoroughly, making it a valuable resource for writing exams.

Dr. Om Patel

4th Student

Shri Shankaracharya Institute of Medical Science,
Bhilai

- 1) More clinical pictures along with explanations are needed.
- 2) This book is very heavy; if possible, it should be divided into two parts.
- 3) This book covers exam-oriented questions, and separate color codes are very useful.
- 4) Classifications, treatments, and management are given briefly with color codes, making it more useful.

Shama Shariff

Final Year

MRIMS

Archith Bloor's textbook of clinical medicine is an excellent resource for undergraduate students who want to gain expertise in clinical knowledge in the field of medicine. The language used in this book is easy and convenient for students to understand and comprehend. The pictures used in the book to explain clinical practices are incredibly helpful. While reading theory, it can be challenging to understand certain concepts, but the use of pictures creates a visual memory that makes it easier to recall information.

Rahul Prakash Gupta (Final Year Students)

RNT Medical College, Udaipur

Numerous algorithmic flowcharts and line diagrams for last-minute revision are good. The book has sufficient content and is presented in simple language, making it a bit easier to understand. It's the best book to prepare for NEET, NEXT, and MRCP preparations. If more image-based questions are included, it would be better for NEXT.

Previously, we used to study Mathew, but since my senior introduced me to the Bloor Exam Prep Manual, there's been no going back.

The content is very comprehensive, with a lot of diagrams and boxes, which serve as a ready reckoner before exams.

Andhra Medical College Final Year

Archith Bloor's "Exam Preparatory Manual for Medicine Subject of MBBS Final Prof" is an indispensable resource for medical students preparing for their final professional exams. The book is meticulously organized, covering all essential topics in medicine with clarity and depth. Bloor's concise yet comprehensive explanations and numerous tables, diagrams, and mnemonics make complex concepts easy to understand and remember. The inclusion of high-yield information and frequently asked questions ensures that students are well-prepared to excel in their exams. Whether used for revision or as a primary study guide, this manual is a must-have for every MBBS final-year student.

Highly recommended!

Bloor's book is thoroughly updated and revised according to the CBME curriculum laid down by the NMC. It includes chapters on AETCOM, pain, and palliative care. I found it easy to read, with clear conceptual explanations and plenty of visual memory aids. The book provides comprehensive information in boxes and figures, serving as a ready reference before examinations. It features numerous algorithmic flowcharts and line diagrams for last-minute revision. Clinical pictures and radiology images are incorporated where needed for better understanding. It covers high-yield areas for MRCP, NEET/NEXT, and other competitive examinations.

DMMC Nagpur

I got a complimentary copy of the "Preparatory Manual of Medicine for Undergraduates" by Archith Bloor. I went through the Hematology and Pulmonology sections and found them amazing and very well explained. The book effectively summarizes key information from Harrison's and Davidson's, providing the exact material we need. This will be my go-to book for medicine. The book's content and flowcharts are its highlights. However, I recommend adding more radiograph pictures, as medicine heavily relies on relevant investigations. Thank you so much for this wonderful book.
